## Industrial excellence deeply rooted in the local community

As a global leader in design & manufacture of intelligent inspection systems for glass containers, we develop robots powered by advanced software & optics. Our aim is to reduce dependence on human factor and increase glass plants productivity, quality and efficiency. Thanks to AI, our solutions automatically detect defects, to ensure good repeatability and improved quality. Since our creation in 2002, we partner with various educational and cultural projects in Lyon & Region.
